1. Introduction

This data booklet deals with Grundfos heavy-duty wastewater pumps called SE/SL, 9-30 kW.

TM05 3010 0812

Fig. 1 SE/SL pump

The 9-30 kW SE/SL pumps are a range of SuperVortex and S-tube impeller pumps specifically designed for pumping sewage and wastewater in a wide range of municipal, private and industrial applications.

SE pumps are equipped with an internal closed-loop cooling system, which enables them to be dry installed. SL pumps do not have a cooling system as they are used for submersible installations only.

The pumps are made of resistant materials, such as cast iron and stainless steel. These materials ensure proper operation.

The pumps are fitted with motors from 9 kW up to 30 kW. The motors are either 2-, 4- or 6-pole motors, depending on the motor size.

The free passage in the pumps is 75 to 160 mm.

The pumps are available for:

- freestanding submerged installation on ring stand
- submersible installation on auto-coupling with fully submerged motor
- submersible installation on auto-coupling with media above pump housing only
- pumps for vertical dry installation
- pumps for horizontal dry installation.

Applications

The SE/SL pumps are designed for applications such as:

- raw water intake systems
- wastewater treatment plants
- municipal pumping stations
- public buildings
- blocks of flats
- industries
- garages
- underground car parks
- car wash areas
- restaurants and hotels.

The pumps are suitable for both temporary and permanent installation. The lifting bracket fitted on the pumps enables easy transportation to and installation on the installation site.

S-tube impeller

The S-tube impeller is the only impeller available in the wastewater market that does not compromise either efficiency or free passage through the pump.

The key to the S-tube design is simplicity, with no cutting or moving functions that can get worn over time, thereby ensuring constant, superior efficiency. The S-tube impeller is a tube-shaped channel impeller placed in a pump housing that matches the smooth tube shape leaving no obstructions or dead zones. A unique balancing method of the impeller ensures minimum vibration in the pump, thus reducing the load on the shaft seal, shaft and bearings.

The S-tube impeller is a no-compromise solution providing free spherical passage through the impeller and pump housing and creating a natural extension of the pipework connected to the pump. This ensures optimum hydraulic efficiency without compromising solids handling. The simple design means lower life cycle costs because abrasive wear is reduced and fewer clogging incidents occur.

Grundfos Blueflux®

Grundfos Blueflux® guarantees the highest motor efficiency from Grundfos. Every aspect of the technology driving a Grundfos Blueflux® motor has been developed to meet the actual needs of the application for which the pump system or solution is installed – and always with an emphasis on reliability and efficiency.

A pump system or solution with a Grundfos **Blueflux®** motor has a considerably higher total efficiency than comparable solutions and reduces life cycle costs substantially. The combination of motor technology, advanced pump design and speed control ensures superior system control, reduced day-to-day service costs and lower environmental impact.

Grundfos **Blueflux®** represents a range of skills and innovative processes that Grundfos brings to motor technology development. Grundfos was instrumental in the drafting and passing of the EuP Directive, setting the ecodesign requirements for electric motors in the European Union.

As a technological leader within high-efficiency motors, Grundfos was invited to help with the technical aspects of the legislation. Grundfos was able to create political awareness of the huge savings potential of variable speed motors and, at a later stage, influence the decision-makers to include variable-frequency drives in the new legislation. As a consequence, Europe's annual electricity consumption will be reduced by 5 % by 2020 – about ten times more than originally planned before Grundfos intervened.

The Grundfos **Blueflux®** label guarantees that the motor technology used is ahead of current market standards and either meets or exceeds legislative requirements for motor efficiency, where these apply.

Smartdesign

smartdesign

Smartdesign describes the functional design of our products that combines elegant appearance with smart features, created with customer needs in mind.

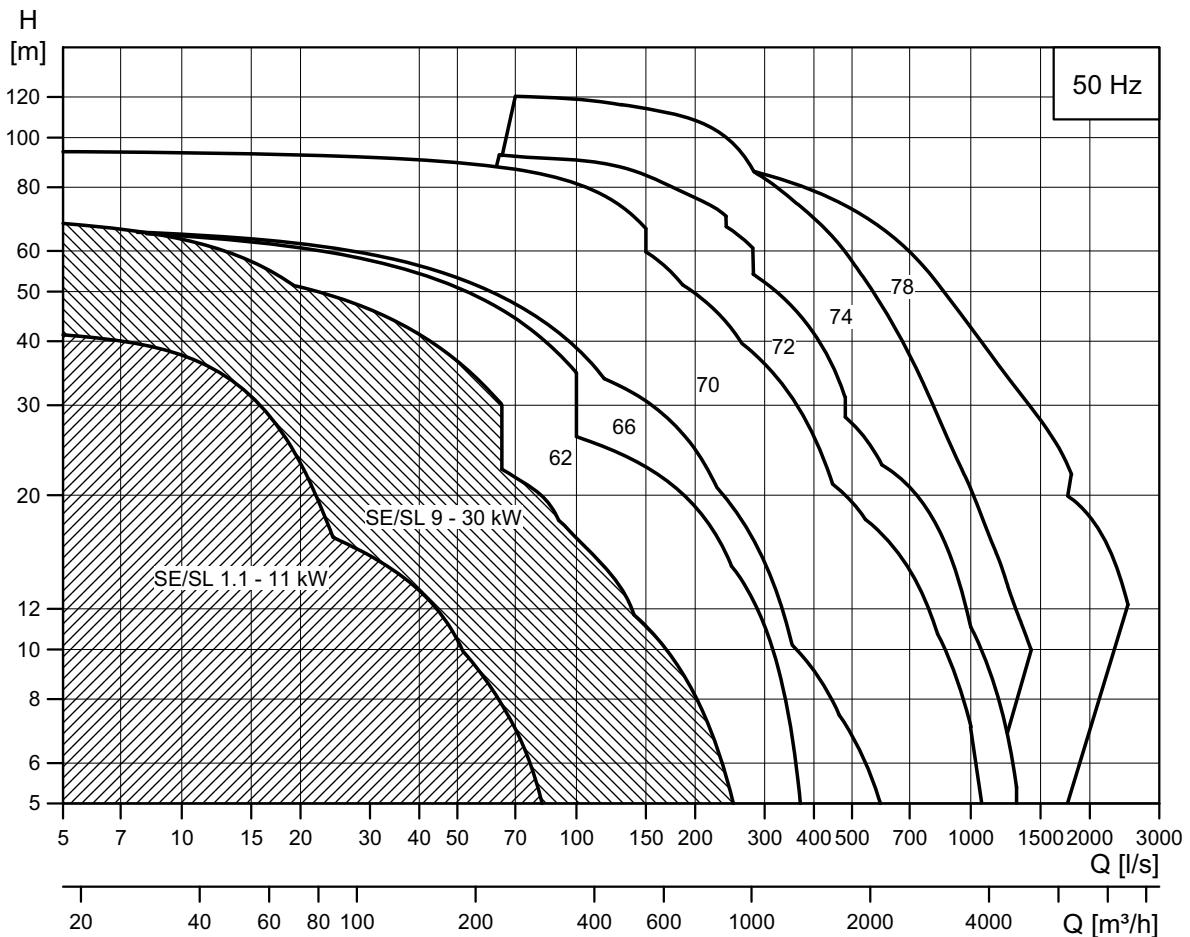

Smartdesign does not only look good; the design also makes installation, operation and maintenance of the product easier and more user-friendly.

The **smartdesign** features of our SE/SL pumps include:

- S-tube impeller
- shaft seal cartridge with double mechanical shaft seal system for reliable sealing between pumped liquid and motor
- leak-proof connections via the Grundfos SmartSeal gasket system
- watertight cable entry made of corrosion-resistant stainless steel
- moisture switch for continuous monitoring of motor housing and automatic cut-off of power in case liquid penetrates
- self-cleaning S-tube impeller with long vanes reducing the risk of jamming or clogging and high pumping efficiency or SuperVortex impeller with improved pumping efficiency and less downtime
- SmartTrim system allowing easy adjustment of impeller clearance and maintaining maximum pump efficiency over pump lifetime
- motor in insulation class H (180 °C), enclosure class IP68 with three thermal sensors in stator windings
- explosion-proof motors for applications involving high risk of explosion
- three stainless steel versions for use in corrosive or aggressive liquids:
 - stainless steel impeller; cast iron pump and motor housing
 - stainless steel pump housing, flange and impeller; cast iron motor housing
 - made entirely of corrosion-resistant stainless steel.

5. Selection of product

Ordering a pump

When ordering an SE/SL pump, 9-30 kW, you need to take the following four aspects into consideration:

- pump
- custom-built variation (option)
- accessories
- controller.

Pump

Use *Product range* on page 10 and *Type key* on page 7 to identify the pump that best fulfils your needs. The list below is a detailed description of the product you get if you order the following pump:

Pump	Product no.
SL1.80.100.265.2.52S.S.N.51D	98145049
• pump as specified in the type key	
• 10 m cable	
• paint: graphic grey, NCS S 9000/N black, thickness 150 µ	
• three thermal switches (Klixon), one in each phase, or three thermal sensors (PTC)	
• one moisture switch below the motor top cover (two moisture switches below the motor top cover on explosion-proof versions)	
• test according to DIN 9906, Annex A.	

See *Performance curves and technical data* on page 43 for selection of a standard pump.

Note *Product-specific data for the pump can also be seen in WebCAPS using the product number 98145049.*

Custom-built variants

The SE/SL pumps can be customized to meet individual requirements. Many pump features and options are available for customization, e.g. explosion-proof versions, various cable lengths or special materials.

Variants can be seen in *List of variants* on page 18. For requirements or designs not included in the list, please contact Grundfos.

Accessories

Depending on the installation type, you may need to order accessories. See *Accessories* on page 85 for selection of the correct accessories.

Note *Ordered accessories are not factory-fitted.*

Controller

The following controllers are available:

- LC/LCD 107 with level pickups
- LC/LCD 108 with float switches
- LC/LCD 110 with level electrodes
- Grundfos Dedicated Controls.

Fig. 3 Grundfos Dedicated Controls

Grundfos Dedicated Controls is a control system designed for installation in either commercial buildings or network pumping stations with one to six pumps. As standard, the system is supplied with application-optimised software and can be configured to meet your specific pumping needs.

For further information about Grundfos Dedicated Controls, see page 35.

763	Flange seal for hose connector	
799	Anchor bolt	

* Available in stainless steel (custom-built option).

9. Product description

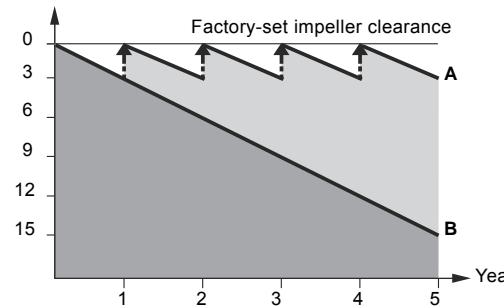

Features

SmartTrim

On conventional pumps, maintaining factory-set impeller clearance is a time-consuming and costly task. The pumps need to be disconnected from the pipework and to be totally dismantled, and new parts need to be installed in order to maintain full pumping efficiency. Not so with Grundfos SmartTrim!

All Grundfos heavy-duty closed impeller pumps, whether for submerged or dry installation, are equipped with the unique SmartTrim impeller clearance adjustment system. This enables you to easily restore the factory-set impeller clearance and maintain peak pumping efficiency. All you need to do is to tighten the adjustment screws on the exterior of the impeller housing. This can be done on site, quickly and easily, without dismantling the pump and without using special tools.

Efficiency drop in %

TM04 2391 2508

A: With Grundfos SmartTrim impeller clearance adjustment system

B: Without impeller clearance adjustment system

SmartSeal

The Grundfos SmartSeal auto-coupling gasket mounted on the pump discharge flange provides a completely leak-proof connection between the pump and the base unit of the auto-coupling system. This optimises the efficiency of the entire pumping system and keeps operating costs at a minimum.

Ball bearings

The bearings are greased for life.

Main bearing: Double-row angular contact ball bearing.

Support bearing: Single-row deep-groove ball bearing.

Shaft seal

The shaft seal consists of two mechanical seals and separates the motor from the pumped liquid.

The shaft seal is a cartridge seal for easy service.

The combination of the primary and secondary seals in a cartridge results in a shorter assembly length compared to conventional shaft seals. Furthermore, this design minimises the risk of incorrect fitting.

The seal faces of the primary shaft seal are SiC/SiC and the seal faces of the secondary shaft seal are carbon/ceramic.

Motor

The motor is a watertight, totally encapsulated motor with:

- insulation class H (180 °C)
- temperature rise class B (60 °C)
- enclosure class IP68.

For motor protection and sensors, see *Sensors* on page 33.

Power cables

Standard H07RN-F

Cable type [mm ²]	Outer cable diameter [mm]		Bending radius [cm]
	min.	max.	
7 x 4 + 5 x 1.5	21.0	23.0	12.0
7 x 6 + 5 x 1.5	23.8	26.8	13.0
7 x 10 + 5 x 1.5	24.5	27.5	14.0

EMC

Cable type [mm ²]	Outer cable diameter [mm]		Bending radius [cm]
	min.	max.	
3 x 6 + 5 x 1	24.5	27.5	14
3 x 10 + 5 x 1	24.7	27.7	14
3 x 16 + 5 x 1	24.9	27.9	14

The standard cable length is 10 m. Other cable lengths are available on request.

See *List of variants* on page 18.

The cable dimension depends on the motor size.

Motor liquid

The motor is factory-filled with Grundfos motor liquid SML-3, which is frost-proof down to -20 °C.

Specification of SML-3:

• Corrosion protection

Grundfos motor liquid protects metals and alloys in the equipment against all forms of corrosion. The combination of low toxicity and FDA-approved ingredients with a high level of corrosion protection makes Grundfos motor liquid unique in the market. The anti-corrosion performance is demonstrated according to ASTM D 1384.

• Compatibility and mixability

Grundfos motor liquid is compatible with most other heat transfer fluids based on mono-propylene glycol. Grundfos motor liquid should only be mixed with clean water. The product can be delivered as a dilution mixed with the proper amount of purified water.

• Toxicity and safety

Grundfos motor liquid consists of FDA-approved components for heat transfer fluids with incidental food contact. Neither the Grundfos motor liquid concentrate nor any dilution is classified according to the European Dangerous Preparations Directive.

Cable entry

Watertight stainless steel cable entry with soft shape and sealing rings to prevent damage of the cable or leaks. The cable entry has a user-friendly design, making it easy and fast for the user to disconnect the cable. Only two bolts must be removed to access the terminal board.

Sensors

SE/SL pumps are available with built-in sensors.

A pump with built-in sensors greatly reduces the risk of downtime and severe damage to your pump as you are informed immediately if a problem occurs.

Sensors can be used for different purposes, depending on pump type and connection. For instance, moisture switches must cut out electricity in case of water penetrating through the cable entry, cable or shaft seal, while bearing temperature sensors are used for monitoring the temperatures in the bearings.

The standard built-in sensors and the optional sensors can be seen in the table below.

	Standard pump	Pump with sensor version 1	Pump with sensor version 2	Standard Ex pump	Ex pump with sensor version ¹	Ex pump with sensor version ²
Klixon/PTC	•	•	•	•	•	•
Moisture switch, top	•	•	•	•	•	•
Moisture switch, bottom	•	•	•			
WIA (water-in-air sensor)				•	•	•
Pt1000 in stator winding	•	•		•	•	
Pt1000 in upper bearing		•			•	
Pt1000 in lower bearing		•			•	
PSV3 vibration sensor	•			•		
IO 113 module	•	•	•	•	•	
SM 113 module	•		•	•	•	

As standard, the pump is equipped with:

- three thermal switches (Klixon), one in each phase
- two moisture switches – one below the motor top cover and one in the upper seal housing chamber (SL) or intermediate seal housing (SE).

Pumps with sensor version 1 are equipped with:

- all sensors from the "standard pump"
- Pt1000 sensor in stator winding for temperature measurement.

Pumps with sensor version 2 are equipped with:

- all sensors from the "standard pump"
- Pt1000 sensor in stator winding for temperature measurement
- Pt1000 sensor in upper and lower bearing for temperature measurement
- SM 113.

The SM 113 module (see description below) will be available at the end of 2012.

IO 113 module

The IO 113 module is a protection module for Grundfos wastewater pumps.

The IO 113 has inputs for digital and analog pump sensors and can stop the pump if a sensor indicates a pump fault.

The IO 113 is connected to the Dedicated Controls system and allows advanced monitoring functions:

- motor temperature
- moisture in motor
- water in oil
- insulation resistance.

SM 113 module

The SM 113 module is used for collection and transfer of sensor data. The SM 113 works together with the IO 113 through power line communication using the Grundfos GENIbus protocol.

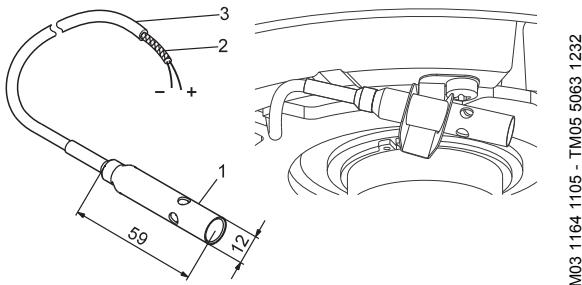

The SM 113 can collect data from:

- 3 current sensors, 4-20 mA
- 3 Pt100 thermal sensors
- 3 Pt1000 thermal sensors
- 1 PTC thermal sensor
- 1 digital input.

Customised sensor options

- Each motor winding has three built-in thermistors which can be used instead of the normal thermal switches. If used, a relay is needed to disconnect power in case of excess temperature.
- The stator temperature sensor is an analogue sensor. Especially for versions without a cooling jacket, a temperature sensor in the stator can be used to give a warning well before the stator/bearings or other parts have reached a harmful temperature and well before the built-in thermal protection cuts-out the motor on overtemperature. In this way, customers can operate the pump with the stator housing above liquid level, provided that it is for short periods and with long intervals.
- The WIA (water-in-air) sensor measures the water resistance and detects if water is present. It also sends a signal if water is detected (alarm).

The sensor is fitted in a stainless steel tube for mechanical protection and is only used for Ex versions. The sensor must be used together with the Grundfos IO 113 or SM 113 module, but it can also be used together with other controllers with inputs of 4 to 20 mA.

Pos.	Designation
1	Steel tube with sensor
2	Screen
3	Cable

- The bearing temperature sensors for upper and lower bearing temperature are PT1000 type sensors.
- The pump vibration sensor is a Grundfos PVS3 sensor (4-20 mA analogue sensor). The vibration sensor monitors the vibration level of the pump. A change in the vibration level indicates an abnormal situation. The cause of this can be a clogged impeller, worn bearings, a closed discharge valve etc., indicating that service inspection should be carried out in order to protect the pump or the pipe system from being damaged.
- The winding resistance can be measured via the Grundfos IO 113 module.

Testing

All pumps are tested before leaving the factory. The factory test report is based on ISO 9906, Annex A. Test reports can be ordered directly together with the pump or can be ordered separately based on the pump serial number.

Other tests or third party inspection certificates are available on request. See *List of variants* on page 18.

Operating conditions

Pumps without a cooling jacket in submerged installation:

- Continuous operation when pump is fully submerged to top of motor.
- Intermittent operation with max. 20 starts per hour when pump is submerged to middle of motor and with short periods of operation down to the top of the pump housing.

Note: Explosion-proof pumps must always be fully submerged.

Pumps with a cooling jacket in submerged and dry installations:

- Continuous and intermittent operation with max. 20 starts per hour with water level down to the top of the pump housing.

Pumped liquids

Pump type	Material variant	Installation	Material	pH value
SE1/ SEV/ SL1/ SLV	Standard	Dry and submerged	Cast iron impeller, pump housing and motor top	6.5 to 14 ²⁾
SE1/ SEV/ SL1/ SLV	Q	Dry and submerged	Stainless steel impeller. Cast iron pump housing and motor top.	6 to 14 ²⁾
SE1/ SEV	S ¹⁾	Submerged	Stainless steel impeller and pump housing.	5.5 to 14 ²⁾
SE1/ SEV		Dry	Cast iron motor top.	1 to 14
SE1/ SEV	R	Dry and submerged	Entire pump in stainless steel	1 to 14
SE1/ SEV	D ¹⁾	Dry and submerged	Stainless steel pump according to EN 1.4517/ 1.4539	0 to 14

¹⁾ Material variants S and D are available on request.

²⁾ For fluctuating pH values, the range is pH 4 to 14.

Liquid temperature: 0 °C to +40 °C.

When pumping liquids with a density and/or a kinematic viscosity higher than that of water, use motors with correspondingly higher outputs.

For short periods (max. 3 min.), a temperature of up to +60 °C is permissible (non-Ex versions only).

Sound pressure

The sound pressure level of the pump is lower than the limiting values stated in the EC Council directive 98/37/EC relating to machinery (the EC Machinery Directive).

Motor range

Shaft power [kW]	No. of poles
11	4
15	2 and 4
18	2, 4 and 6
22	2 and 4
27	2

Explosion-proof pumps

Use explosion-proof pumps in potentially explosive environments. The explosion protection classification of the pumps is Ex c d IIB T3. The Ex d IIB T4 protection classification is available on request. Operation of the pump via a frequency converter requires temperature class T3. All installations must be approved by the local authorities.

Level controllers

Grundfos offers a wide range of pump controllers to keep a watchful eye on liquid levels in the wastewater collecting tank, ensuring correct operation and protection of the pumps.

Controller ranges:

- Dedicated Controls, DC control cabinets
- LC and LCD level controllers.

Dedicated Controls

GRA6270

Fig. 16 Dedicated Controls control cabinet

Grundfos Dedicated Controls is a control system that can control and monitor one to six Grundfos wastewater pumps and a mixer or a flush valve.

Dedicated Controls is used in installations requiring advanced control and data communication.

Main components of the Dedicated Controls system:

- CU 361 control unit
- IO 351B module (general I/O module).

Dedicated Controls is available either as separate components or as control cabinets.

The control system can be operated by the following:

- float switches
- a level sensor
- a level sensor and safety float switches.

The control cabinet is available for the following pump sizes and starting methods:

- pumps up to and including 9 kW, direct-on-line starting
- pumps up to and including 30 kW, star-delta starting
- pumps up to and including 30 kW, soft starter.

The separate control unit and modules can be built for practically any size of system.

CU 361 control panel

8	Esc
9	Ok
10	Home
11	Contrast
12	Indicator light, operation (green)
13	Indicator light, fault (red)

Features and benefits

The Grundfos Dedicated Controls system offers these features and benefits:

Basic features

- Pump start/stop
- alternating operation of pumps
- overflow detection
- overflow measurement
- alarms and warnings
- advanced alarm schedules
- start and stop delays
- free language selection.

Advanced features

- User-defined functions
- alternation between groups
- start level variation (reduced sedimentation)
- combi alarms
- daily emptying
- foam draining
- anti-seizing (limestone)
- safety after-run delay
- mixer or flush valve
- maximum number of started pumps
- pump flow measurement
- system flow measurement
- pump flow calculation
- system flow calculation.

Additional features, IO 113

- Monitoring of:
 - insulation resistance
 - moisture in motor
 - water in oil.

Additional features, MP 204

- Anti-blocking
- monitoring of:
 - voltage
 - current
 - current asymmetry
 - phase sequence
 - $\cos \phi$ (power factor)
 - power
 - energy
 - insulation resistance
 - temperature, Pt100/Pt1000
 - temperature, PTC
 - temperature, Tempcon.

Additional features, CUE or VFD

The CUE/VFD (optional), which is either a Grundfos variable-frequency converter or a general variable-frequency converter, also offers better pump protection and a more steady flow through the pipe system.

In addition, Grundfos CUE/VFD offers these features and benefits:

- anti-blocking
- automatic energy optimisation
- specific-energy test
- output frequency
- monitoring of:
 - voltage*
 - current*
 - phase sequence*
 - power*
 - energy*
 - torque*
- reverse start
- run flushing
- stop flushing
- PID control.

* These functions are only available with a Grundfos CUE.

Communication features

- Complete overview of the pump installation
- setpoint change, resetting of system and start/stop of pumps
- access to complete alarm/warning log
- automatic redirection of alarms and warnings to the on-duty staff
- optimisation of your maintenance and service programme
- reduction in energy consumption
- Modbus RTU communication via cable
- Modbus TCP communication via GSM/GPRS
- SMS commands (send/receive)
- SMS schedule
- VNC connection for migration of user interface to a web browser.

For further information, see the data booklet or installation and operating instructions for Dedicated Controls on www.grundfos.com (WebCAPS).

LC and LCD

The Grundfos LC and LCD range of level controllers are designed for one- and two-pump installations. It comprises three series with a total of six variants:

- LC and LCD 107 operated by air bells
- LC and LCD 108 operated by float switches
- LC and LCD 110 operated by electrodes.

All controllers are ideally suited for applications requiring up to 11 kW motors for direct-on-line starting. The LC and LCD can also be supplied with an integrated star-delta starter for applications requiring larger motors up to and including 30 kW.

TM04 2360 2408

Fig. 18 LCD 110 for two-pump installations

Features and benefits

- Control of one pump (LC) or two pumps (LCD)
- automatic alternating operation of two pumps (LCD)
- automatic test run (prevents shaft seals from becoming jammed in the event of long periods of inactivity)
- water hammer protection
- starting delay after power supply failure
- automatic alarm resetting, if required
- automatic restarting, if required
- alarm output as NO and NC.

When an SMS module (optional) is fitted in an LC or LCD controller, it acts as a time recorder for the pumps, and when programmed (using an ordinary mobile phone with text messaging facility), it can send text messages containing "high-level alarm" and "general alarm", information about operation and the number of times the pump has started. The SMS module is also available with battery and can thus send text messages that will inform you of power failure and when the power has been restored.

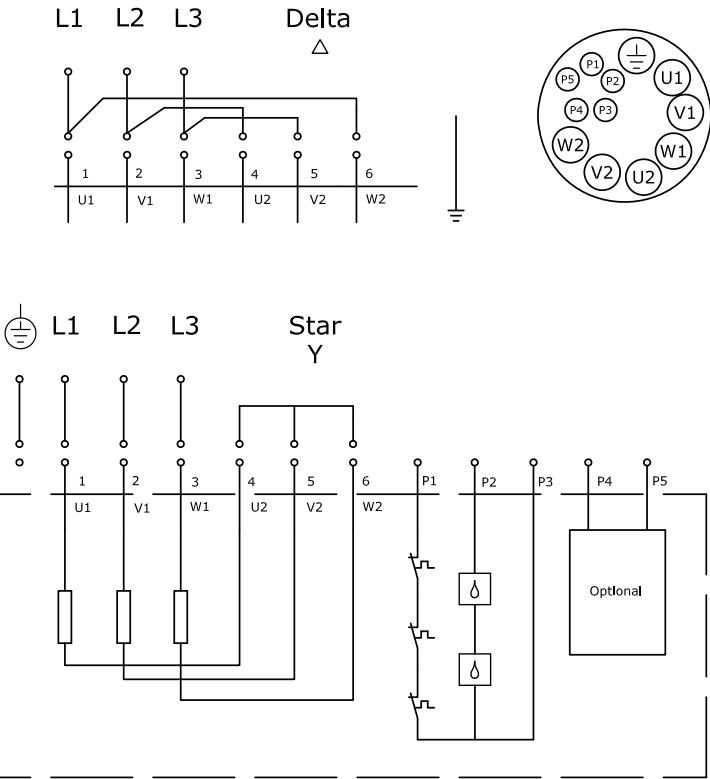

For further information, see the data booklet or installation and operating instructions for the LC and LCD controllers on www.grundfos.com (WebCAPS).

10. Curve charts and technical data

How to read the curve charts

TM04 3460 4608

Curve conditions

The guidelines below apply to the curves shown in the performance charts on pages 43-84.

- Tolerances according to: ISO 9906, Annex A.
- The curves show pump performance with different impeller diameters at rated speed.
- The curves apply to the pumping of airless water at a temperature of +20 °C and a kinematic viscosity of 1 mm²/s (1 cSt).
- **ETA:** The lines show the hydraulic efficiency values of the pump for the different impeller diameters.
- **NPSH:** The curves show average values measured under the same conditions as the performance curves.

When dimensioning the pump, add a safety margin of at least 0.5 m.

- In case of densities other than 1000 kg/m³, the discharge pressure is proportional to the density.
- When pumping liquids with a density higher than 1000 kg/m³, motors with correspondingly higher outputs must be used.

Calculation of total head

The total pump head consists of the height difference between the measuring points + the differential head + the dynamic head.

$$H_{\text{total}} = H_{\text{geo}} + H_{\text{stat}} + H_{\text{dyn}}$$

H_{geo} : Height difference between measuring points.

H_{stat} : Differential head between the suction and the discharge side of the pump.

H_{dyn} : Calculated values based on the velocity of the pumped liquid on the suction and the discharge side of the pump.

Performance tests

The requested duty point for every pump is tested according to ISO 9906, Annex A, and without certification.

In case of pumps ordered on the basis of impeller diameter only (no requested duty point), the pump will be tested at a duty point which is 2/3 of the maximum flow of the published performance curve which is related to the ordered impeller diameter (according to ISO 9906, Annex A).

If the customer requires either more points on the curve to be checked or certain minimum performances or certificates, individual measurements must be made, and a certificate can be ordered.

Certificates

Certificates have to be confirmed for every order and are available on request as follows:

- certificate of compliance with the order
(EN 10204 - 2.1)
- pump test sheet.

Witness test

When the pumps are being tested or are tested with a certification, it is possible for the customer to witness the testing procedure according to ISO 9906.

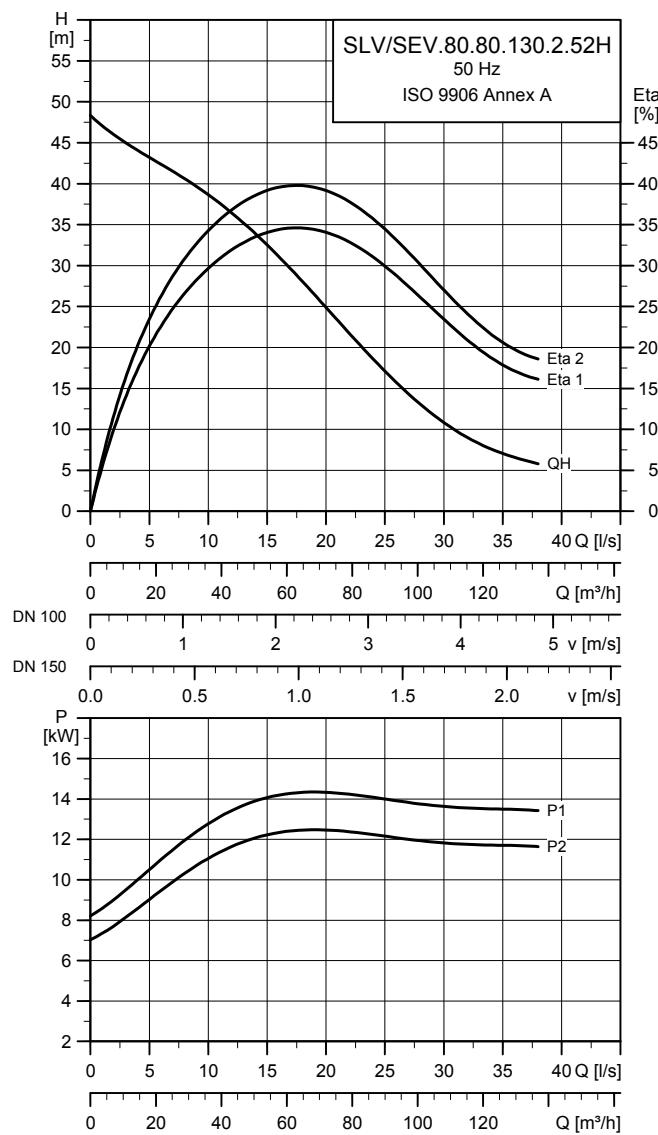

The witness test is not a certificate and will not result in a written statement from Grundfos. The witness test only guarantees that everything is carried out as prescribed in the testing procedure.

If the customer wants to carry out a witness test of the pump performance, such request must be indicated on the order.

14. Further product documentation

WebCAPS

WebCAPS is a **Web-based Computer Aided Product Selection** program available on www.grundfos.com.

WebCAPS contains detailed information on more than 220,000 Grundfos products in more than 30 languages.

Information in WebCAPS is divided into six sections:

- Catalogue
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

Catalogue

Based on fields of application and pump types, this section contains the following:

- technical data
- curves (QH, Eta, P1, P2 etc.) which can be adapted to the density and viscosity of the pumped liquid and which show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts etc.

Literature

This section contains all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as service kit catalogues and service kit instructions
- quick guides
- product brochures.

Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps.

Furthermore, the section contains service videos showing you how to replace service parts.

Sizing

This section is based on different fields of application and installation examples and gives easy step-by-step instructions in how to size a product:

- Select the most suitable and efficient pump for your installation,
- Carry out advanced calculations based on energy, consumption, payback periods, load profiles, life cycle costs etc.
- Analyse your selected pump via the built-in life cycle cost tool.
- Determine the flow velocity in wastewater applications etc.

Product No.	Product name	Phase	Value
26300012 1 CR 10-1		2	220-240 D / 380-415 V
26300012 2 CR 10-1		3	220-240 D / 380-415 V
26300012 3 CR 10-1		3	220-240 D / 380-415 V
26300012 4 CR 10-2		3	220-240 / 380
26300012 5 CR 10-3		3	220-240 D / 380-415 V

Replacement

In this section, you find a guide to selecting and comparing replacement data of an installed pump with a view to replacing the pump with a more efficient Grundfos pump.

The section contains replacement data of a wide range of pumps produced by manufacturers other than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed at your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

CAD drawings

In this section, you can download two-dimensional (2D) and three-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

2D drawings:

- .dwf, wireframe drawings
- .dwg, wireframe drawings

3D drawings:

- .dwg, wireframe drawings (without surfaces)
- .stp, solid drawings (with surfaces)
- .eprt, E-drawings.

WinCAPS

Fig. 32 WinCAPS DVD

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 220,000 Grundfos products in more than 30 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no Internet connection is available.

WinCAPS is available on DVD and is updated once a year.

Subject to alterations.
